Work Experience

Bank of Cyprus, Nicosia

June 2026 – Present

Software Engineer Intern

- Backend development internship working within BoC's in-house development teams using **Java**, **OracleDB**, and **Apache Kafka**; API testing with **Bruno** and project tracking via **Jira**.

KIOS Research Center, University of Cyprus

July 2025 – April 2026

Software Engineer Intern

- Built data engineering pipelines for EV charging datasets under the **EU ePowerMove** project (synthetic data generation, timestamp alignment, feature engineering), created **MATLAB/Python** visualizations tracking charging schedule evolution across optimization iterations, and researched European **V2G/V2X** pilot projects.

IKEA, Nicosia

July 2024 – September 2024

Help Desk, customer support and technical guidance for in-store and online purchases.

Education

Bachelor of Computer Science

University of Cyprus GPA: 8.19 Expected Graduation: June 2027

Focus areas: Distributed Systems, Parallel Computing, Operating Systems, Databases, Networks

Projects

Raven — Distributed Event Streaming System

Go | gRPC | Docker | Kubernetes | Prometheus

- Built a distributed pub-sub event streaming system in **Go** with multi-broker replication, partition-based message ordering, consumer group offset tracking, and at-least-once delivery guarantees.
- Deployed as a **StatefulSet** on Kubernetes with **Prometheus** metrics tracking message throughput, consume rate, and replication errors, visualized via a **Grafana** dashboard.

Healthcare Management Platform (Full-Stack)

C# .NET | PostgreSQL | React | Docker

- Developed a full **EHR system** as part of a team for a health company (**3AE Health**) managing patient appointments, medications, nutrition tracking, and staff shift management. Built a **RESTful API** backend with **.NET Core** implementing authentication (including fingerprint), barcode scanning for medication tracking, and real-time inpatient monitoring. Designed and normalized a **PostgreSQL** database schema using **UML** diagrams following healthcare data standards with optimized queries for patient records and medication management. Implemented cross-platform mobile and web interfaces using React and React Native with Expo, deployed via **Docker** containers.

CyprusRide — Ride-Hailing Database System

SQL Server | ASP.NET Core | Leaflet.js

- Designed a normalized relational database (**3NF**) built on a **30+ table SQL schema** with **stored procedures, triggers, and constraints** for ride requests, user authentication, and availability checks; generated **10k+** synthetic records. Implemented an **ASP.NET Core** web UI with **Leaflet.js** for interactive map-based ride booking and dynamic reporting with filtering and grouping capabilities.

Technical Skills

- **Languages:** Java, Go, C# .NET, Python, C, C++
- **Infrastructure:** Docker, Kubernetes, Prometheus, Grafana, Linux, Git
- **Databases:** PostgreSQL, OracleDB, SQL Server, MySQL
- **Frameworks:** Spring Boot, ASP.NET Core, FastAPI
- Military Service at Special Forces
